add-reputation
get_points
leaderboard
-injected into Results module

main.py - run_cli()
app = StreetRaceManager(initial_cash=1000)
app.registration / app.crew / app.inventory
app.race / app.results / app.missions / app.garage
build_parser() → dispatches CLI commands

StreetRaceManager(streetrace_manager/__init__.py)
self.registration / self.crew / self.inventory
self.race / etc

Registration Module
register_~~name~~ member(name, role="")
is_registered
get_member(name)
all members()
→ creates Crew Member model
→ raises ValueError on dupe

Crew Mangment
-init_(registration)
assign role(name, role)
set_skill_level
has role(name, role)
members_with_role(role)

Inventory
-init()
add_~~reputation~~ car
get_~~possed~~ car
add_cash(n)
deduct cash
add spare_parts
add_tools
mark_car_damaged

Race Management
-init()
create_race
get_race
enter_race

Mission Planning
-init()
create_mission
on_start_mission(id)
